

Backend-focused software developer with hands-on experience in cloud infrastructure (AWS, Terraform), event-driven systems, and AI-integrated applications. Skilled in RESTful service design, Infrastructure-as-Code, and full-stack delivery, with a focus on reliable system design and disciplined debugging.

EDUCATION

2024-2028	B.E. in Computer Science and Engineering, Saveetha Engineering College, Chennai; Current CGPA: 9.6/10
2024	CBSE Class XII, St John’s Senior Secondary School, Chennai; Score: 90.6%

TECHNICAL HIGHLIGHTS AND SKILLS

Languages:	Java, Python, C, SQL, TypeScript
Frameworks/Libraries	Spring Boot, Spring Data JPA/Hibernate, FastAPI, React JS, Kafka (Producer-Consumer workflows)
Cloud and DevOps	AWS (EC2, ECS Fargate, RDS, S3, IAM, CloudWatch), Terraform, Docker, Railway, Vercel, GitHub Actions CI/CD
Tools:	Git, GitHub, Maven, Postman, Redis, Eclipse IDE, VS Code
Database	MySQL, PostgreSQL – schema design, transactions
Soft Skills:	Communication, teamwork, problem-solving, patience, leadership

CERTIFICATIONS AND TRAININGS

- Oracle Certified Professional: Java SE 21 Developer - Oracle (Nov 2025) Credential
- JPMorganChase Software Engineering Job Simulation on Forage - January 2026: built backend components using Spring Boot and Kafka, implemented transaction processing and incentive services Credential

EXPERIENCE

- **Software Development Engineering Intern - Presidio** 2026 (6 weeks)
Completed a mentor-led internship spanning backend, frontend, DevOps, and AI/LLM integration; Shipped progressive full-stack projects covering microservices, React/TypeScript, CI/CD, and AWS deployment.
- **SDE Intern - IntakeOff.AI** Apr–May 2026
Diagnosed and resolved production Railway deployment failures from a merged ML pull request, refactored ML imports for stability, fixed CI test suites, set up Redis caching, and authored a full DevOps handover package.

PROJECT EXPERIENCE

- **Edhir - Adaptive Behavioral Web Application Firewall** - Built a distributed, event-driven system to detect web attacks in real time, combining signature-based filtering with behavioral machine learning scoring, track session risk through adaptive thresholds that resist evasion, and enable pluggable protection via a reverse proxy sidecar or embeddable SDK for any application. Containerized with Docker across independent proxy, ML, and dashboard services, using PostgreSQL and RabbitMQ for persistent, decoupled asynchronous processing. *Tools: Java, Spring Boot, Python, React, PostgreSQL, RabbitMQ, Docker*
- **Aegis - Autonomous Attack-Path Simulation Platform** - Built a digital-twin security platform modeling network topology as a graph, with a custom pathfinding agent identifying highest-risk attacker routes and a greedy optimization engine recommending minimal-effort, maximum-impact fixes. *Tools: Python, FastAPI, NetworkX, React, D3.js, SQLite, Anthropic Claude API, NVD API*

ACHIEVEMENTS

- Winner, Ossome Hacks 3.0 [2026] – GitHub Community SRM
- Finalist, Fynergy 2025 – IIT Madras
