

Systems-oriented Software developer with a strong foundation in Software Engineering fundamentals. Experienced in building, debugging applications and integrating RESTful services, database-backend applications, and event-driven workflows through hands-on projects. Interested in reliable system design, clean architecture, and disciplined debugging to deliver predictable, scalable software.

EDUCATION

2024–2028	B.E. in Computer Science and Engineering, Saveetha Engineering College, Chennai; Current CGPA: 9.6/10
2024	CBSE Class XII, St John’s Senior Secondary School, Chennai; Score: 90.6

TECHNICAL HIGHLIGHTS AND SKILLS

Languages:	Java, Python, C, SQL
Frameworks/Libraries	SpringBoot, Spring Data JPA/Hibernate, React JS, Kafka(Producer-Consumer work-flows)
Cloud and DevOps	AWS (EC2, S3, IAM, CloudWatch), Railway, Vercel
Tools:	Git, Github, Maven, Postman, Eclipse IDE, VScode
Database	MySQL – schema design, transactions
Soft Skills:	Communication, teamwork, problem-solving, patience, leadership

CERTIFICATIONS AND TRAININGS

● Oracle Certified Professional: Java SE 21 Developer — Oracle (Nov 2025)	Credential
● JPMorganChase Software Engineering Job Simulation on Forage - January 2026	Credential
- Built backend components using Spring Boot and Kafka	
- Implemented transaction processing and incentive services	
- Debugged real-world integration issues using logs and breakpoints	

EXPERIENCE

● Software Development Engineering Intern — Presidio	2026 (6 weeks)
Undergoing structured company training as part of a 6-week SDE internship program, building exposure to enterprise software development practices and tooling.	
● SDE Intern — IntakeOff.AI	Apr–May 2026
Early-stage AI startup; handled DevOps — CI/CD pipelines, Railway, Vercel deployments, and GitHub branch management.	

PROJECT EXPERIENCE

● DevArchive: Self-Referential Debugging Knowledge Base — Building a backend-driven system to store real-world errors encountered during development, annotate them with context, root causes, and fixes, and enable structured search and retrieval. Designed to mirror how developers actually debug by learning from past failures. <i>Tools: Java, Spring Boot, REST APIs, JPA, MySQL/H2</i>
● Midas Core Backend System (JP Morgan Chase Forage) — Built and debugged a transaction-processing backend handling Kafka-based event ingestion, SQL persistence with JPA, and REST-based service integration. Implemented validation logic, incentive-based balance updates, and exposed secure balance-query APIs. <i>Tools: Java, Spring Boot, Kafka, JPA (Hibernate), H2, REST APIs</i>

ACHIEVEMENTS

● Winner, Ossome Hacks 3.0 [2026] – Github Community SRM
● Finalist, Fynergy 2025 – IIT Madras
